1 -BEFORE THE ARIZONA MEDICAL BOARD

In the Matter of

STEPHEN MORRIS, M.D.

Holder of License No. **10800**
For the Practice of Medicine
In the State of Arizona.

Board Case No. MD-01-0557

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

(Decree of Censure & Probation)

This matter was considered by the Arizona Medical Board ("Board") at its public meeting on October 3, 2002. Stephen Morris, M.D., ("Respondent") appeared before the Board with legal counsel Dan Jantsch for a formal interview pursuant to the authority vested in the Board by A.R.S. § 32-1451(H). After due consideration of the facts and law applicable to this matter, the Board voted to issue the following findings of fact, conclusions of law and order.

FINDINGS OF FACT

1. The Board is the duly constituted authority for the regulation and control of the practice of allopathic medicine in the State of Arizona.

2. Respondent is the holder of License No. 10800 for the practice of allopathic medicine in the State of Arizona.

3. The Board initiated case number MD-01-0557 after receiving information from an anonymous source regarding Respondent's prescribing of controlled substances to a female patient ("IS"). The Board's investigation revealed that in 2001 Respondent had written 65 prescriptions totalling 6,198 dosage units of Oxycodone to IS. The prescriptions were issued using variations of both IS's name and other identifying information and were filled at pharmacies in both Arizona and California.

4. At the formal interview Respondent testified that he had been practicing medicine for approximately 29 years and that in his private practice he basically treats

patients who have anxiety disorders and depressive disorders. Respondent stated that he was also a staff psychiatrist for Value Options, a privately run company that is contracted with the State to provide care for the seriously mentally ill in Maricopa County.

5. Respondent testified that IS's case was complicated and that he very much regretted the situation. According to Respondent, he began treating IS after she called him to set an appointment and related to him that she was depressed and being treated for pain due to an automobile accident. IS indicated that she believed the pain was contributing to her depression. Respondent testified that he first saw IS approximately two or three weeks after first having spoken to her on the phone. Respondent stated that IS was divorced, had two small children, and presented in a timely fashion and was well groomed at the first appointment. According to Respondent, IS was being treated with methadone for her pain and she asked him to help her get off the methadone. Respondent indicated that he believed that the two things that "threw him off the track" of detecting that IS was a problem patient were her presentation at his private practice and her presentation as a well-groomed housewife.

6. Respondent testified that his first erroneous decision was to attempt to get IS off the methadone. Respondent stated that the plan was for IS to obtain a second consult from an orthopedic surgeon who would treat her for her pain problem after Respondent withdrew her from the Methadone and began treating her for depression. Respondent stated that it was an error on his part to not check with any of IS's prior treating physicians and get her records. Respondent stated that if IS presented today he would immediately refer her to a pain specialist.

7. Respondent was asked why he did not refer IS to a pain specialist and why he prescribed what appeared to be a tremendous amount of medication. Respondent stated that initially things went well with IS and she was on less and less Methadone (10

milligrams from 60) and was doing well over a period of about two months. Respondent stated that IS then began to complain of pain in her neck from the automobile accident and he prescribed 20 Percocet. Respondent testified that IS called him three or four days after he prescribed the Percocet and said they were all used up. Respondent testified that IS told him that she lost her job, her insurance, and her apartment and had to move to California to live with her brother. Respondent testified that he believed he had a responsibility to see that IS received treatment even though she repeatedly told him she could not afford to see anyone else. Respondent stated that he continued to attempt to prescribe less and less doses of the pain medication, but being a psychiatrist he was aware of the potential for suicide and tried to space the medication and make it a little more difficult for IS to get. Respondent testified that IS eventually was kicked out of her brother's home and ended up in a trailer park.

8. Respondent was asked about his writing prescriptions for IS using different names. Respondent testified that he used different names because IS told him she had different names. According to Respondent IS told him that "I" was not her first name, but another name somewhat related to "I" and that in while in San Diego she used a name that she said her family referred to her by. Respondent was also asked about using Federal Express to send IS her prescriptions. Respondent stated that using Federal Express is not normal practice.

9. Respondent's attention was drawn to a February 19, 2001 note in IS's chart stating "Patient clearly has an addiction problem." Respondent was asked why he continued to prescribe large amounts of pain medication for approximately eight more months to a patient whom he believed had an addiction problem. Respondent stated that what he should have done was referred IS to a methadone clinic.

1 10. Respondent was asked why he eventually terminated his treatment
2 relationship with IS. Respondent testified that he called the medical records departments
3 of two hospitals at which IS claimed to have been treated and was told there were no
4 records to validate her claims. Respondent stated that at that point IS had also "no-
5 showed" him four times in a row. Respondent stated that he was aware that IS's health
6 insurance would be becoming effective in a short period and he was confident that she
7 could find another treating physician. Respondent also stated that he received a phone
8 call from a pharmacy inquiring about a prescription for IS and when the pharmacy faxed
9 the prescription he saw that IS had forged his signature. Respondent stated that all these
10 factors led him to close IS's case.

11 11. Respondent testified that in February 2002 he took a course in prescribing to
12 help him better identify problem drug-seeking patients.

13 12. The applicable standard of care would require a treating psychiatrist to have
14 the pain records to justify the chronic use of narcotics and, if the psychiatrist undertakes to
15 treat a patient for withdrawal, that there be a pain contract.

16 13. Respondent's conduct was unreasonable in that, given the standard of care,
17 he did not obtain IS's pain records and did not enter a pain contract with IS when he
18 began to treat her for withdrawal.

19 14. There was potential harm to IS because her ongoing dependency was
20 maintained.

21 **CONCLUSIONS OF LAW**

22 1. The Arizona Medical Board possesses jurisdiction over the subject matter
23 hereof and over Respondent.

24

25

2. The Board has received substantial evidence supporting the Findings of Fact described above and said findings constitute unprofessional conduct or other grounds for the Board to take disciplinary action.

3. The conduct and circumstances above in paragraphs 3, 6, 8 and 12 through 14 constitute unprofessional conduct pursuant to A.R.S. § 32-1401(24)(j) ("[p]rescribing, dispensing or administering any controlled substance or prescription-only drug for other than accepted therapeutic purposes;") and 32-1401(24)(q) ("[a]ny conduct or practice that is or might be harmful or dangerous to the health of the patient or the public.")

ORDER

Based upon the foregoing Findings of Fact and Conclusions of Law,

IT IS HEREBY ORDERED that:

1. Respondent is issued a Decree of Censure for improper prescribing of excessive amounts of controlled substances and failure to perform an adequate evaluation of a patient's condition.

2. Respondent is placed on Probation for one year with the following terms and conditions:

(a) Respondent shall within one year of the effective date of this Order, obtain 20 hours of Board staff pre-approved Category I Continuing Medical Education (CME) in medical ethics to include boundary issues. Respondent is to provide Board staff with satisfactory proof of attendance. The CME hours shall be in addition to the hours required for biennial renewal of Respondent's medical license.

(b) Respondent shall be subject to a pharmacy chart review within one year of the effective date of this Order. The Board retains jurisdiction to take additional disciplinary action based on the results of the chart review.

(c) Respondent shall pay the costs associated with monitoring his probation as designated by the Board each and every year of probation. Such costs may be adjusted on an annual basis. Costs are payable to the Board no later than 60 days after the effective date of this Order and thereafter on an annual basis. Failure to pay these costs within 30 days of the due date constitutes a violation of probation.

RIGHT TO PETITION FOR REHEARING OR REVIEW

Respondent is hereby notified that she has the right to petition for a rehearing or review. Pursuant to A.R.S. § 41-1092.09, as amended, the petition for rehearing or review must be filed with the Board's Executive Director within thirty (30) days after service of this Order and pursuant to A.A.C. R4-16-102, it must set forth legally sufficient reasons for granting a rehearing or review. Service of this order is effective five (5) days after date of mailing. If a motion for rehearing or review is not filed, the Board's Order becomes effective thirty-five (35) days after it is mailed to Respondent.

Respondent is further notified that the filing of a motion for rehearing or review is required to preserve any rights of appeal to the Superior Court.

DATED this 4th day of December, 2002.

BEFORE THE ARIZONA MEDICAL BOARD

In the Matter of **STEPHEN O. MORRIS, M.D.** Holder of License No. **10800** For the Practice of Allopathic Medicine In the State of Arizona.	Board Case No. MD-06-0358A **FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER** (Letter of Reprimand)

The Arizona Medical Board ("Board") considered this matter at its public meeting on October 11, 2007. Stephen O. Morris, M.D., ("Respondent") appeared before the Board with legal counsel Sarah L. Sato for a formal interview pursuant to the authority vested in the Board by A.R.S. § 32-1451(H). The Board voted to issue the following Findings of Fact, Conclusions of Law and Order after due consideration of the facts and law applicable to this matter.

FINDINGS OF FACT

1. The Board is the duly constituted authority for the regulation and control of the practice of allopathic medicine in the State of Arizona.

2. Respondent is the holder of License No. 10800 for the practice of allopathic medicine in the State of Arizona.

3. The Board initiated case number MD-06-0358A after receiving a complaint regarding Respondent's care and treatment of a fifty-six year-old male patient ("JN") alleging Respondent's inappropriate and excessive prescribing contributed to JN's overdose and death. JN had a history of multiple psychiatric diagnoses, polysubstance abuse, and non-compliance with medication recommendations. JN was referred to Respondent and had his first visit on February 17, 2004. Over the next fifteen months, Respondent prescribed a broad range of psychoactive controlled substances. JN died on May 9, 2005 from an accidental overdose of prescription medication.

4. Prior to presenting to Respondent, JN was being treated by an allergist/immunologist/internist for depression. This physician noted JN had high blood pressure and her records indicate she prescribed Zyprexa, BuSpar, Trazodone, Lamictal, Klonopin, testosterone injections, Fioricet, and Diovan and she identified an "increased dose of codeine for pain." This physician diagnosed "Bipolar – Depression," headache and pain and also treated JN with all the medications listed above plus Celebrex, Xanax, Imitrex, Tramalol, Ultram, Botox, Effexor and Adderall. On January 29, 2004 this physician noted JN's alcohol abuse had increased and was "probably every day." On this same date, she referred JN to Respondent for psychiatric evaluation. On the first visit Respondent used a standardized SCID form, but did not document a standard mental status examination and did not list any DSM-IV Axis I-IV diagnosis. Respondent indicated there was alcohol and marijuana abuse; depression, which may have been substance induced; irritability, suicidal thoughts; and positive hypomania.

5. Over the next fifteen months that Respondent treated JN he prescribed multiple psychoactive prescriptions often in higher than standard practice doses. Respondent wrote multiple prescriptions for the same Class of medication, particularly sleep medication and controlled Class V medications. Respondent also prescribed methylphenidate for several months with a higher than necessary number of pills prescribed. For instance, when prescribing methylphenidate 20mg tid, Respondent prescribed the 10mg size "2tid" instead of the 20 mg size, resulting in a prescription of 180 controlled substance pills instead of 90. The same dose was available in single capsule, one daily dosing (30 per month) that had a much lower potential for abuse or diversion. Respondent also write prescriptions too close together in time, indicating over-use or abuse. Respondent's record contains no entry indicating concern for possible substance abuse, diversion to others, or of being manipulated for more medication than necessary.

6. Respondent documented that he referred JN to a therapist within his practice, but made no follow-up comments to indicate if JN ever underwent the therapy sessions or how they might impact JN's care or Respondent's further prescribing. Respondent's records show constantly shifting medications; polypharmacy; no clear cut differential diagnosis or primary diagnosis that he was addressing; no rationale when medications, including controlled substances, were abruptly stopped or started for brief periods; no explanation of why higher than recommended amounts were prescribed; and no consultations. Respondent's record does not contain any communication back to the referring physician for coordination of JN's care.

7. On March 25, 2005 JN presented to Respondent's office clearly drugged and admitted to taking Phenobarbital. JN went to St. Luke's and was discharged on Gabitril, Paxil, Neurontin, and Doxepin for sleep. Respondent placed JN on Adderall-XR 15mg q d #30. There is no adequate work-up for ADHD or a diagnosis of ADHD in the records to support the prescribing of Adderall for ADHD. There is also no note that the prescription was for adjunct treatment of depression, for narcolepsy, daytime sleepiness or other off-label use. On April 20, 2005 Respondent prescribed Doxepin 100mg #60, indicating up to 200mg per day, or four times the hospital discharge dose. Respondent prescribed the Doxepin, a first generation tricyclic antidepressant and, on the same day, prescribed Paxil, a second generation antidepressant, at 60mg per day, given as a 40mg and 20mg tablet. In total on this date JN was given Paxil 40mg #30, Paxil 20mg #30, Doxepin 100mg #60 and Imitrex 100mg #5 – a total of 125 pills. Respondent prescribed this amount after JN was hospitalized twice with suicidal ideation, admitted substance abuse, including prescription abuse, and even though JN was highly unstable. The pharmacy refilled the Doxepin 16 days later and also filled a prescription for Lunesta 3mg #30. Two days earlier JN filled a prescription for Neurontin 300mg #270.

8. Respondent's record only reflects that he performed a mental status of JN on his initial visit and not again during his treatment. Respondent does not complete an entire mental

status examination again on patient, rather he does a focused evaluation, but does not always record it. Respondent records contain many of JN's subjective complaints, but not much objective analysis and no assessments or diagnoses. Respondent's January 19, 2005 note, just prior to JN's hospitalization, mentions JN's suicidal ideation and other things, but there is no documentation of any questioning of harm to himself or others.

9. Respondent maintained his doubling and then quadrupling the dose of Doxepin over a short period of time after JN's hospitalization was not a large dose, even though he acknowledged it is typically given in a lower dose and escalated as needed. Paxil and Doxepin interact and the Paxil takes over the P450 enzyme system to the exclusion of the Doxepin and the Doxepin metabolism is slowed down, it tends to linger and build. JN was a patient with known polysubstance abuse and clear patterns of overuse of prescribed medications, yet Respondent did not maintain control over the medications. Respondent agreed that monitoring blood levels of tricyclic antidepressants in a patient who is also on SSRIs is important, yet there was no evidence in JN's records that he did so. Respondent noted the literature reflects that in research blood levels and EKGs are done, but he does not believe doing so has "trickled down" to the clinical level.

10. Respondent maintained JN did not exhibit any signs of Serotonin Syndrome, yet his records reflect that essentially every little thing caused him to tremor more. One of the effects of high brain levels of serotonin is clonus or tremor. However, Respondent never considered that JN might have had Serotonin Syndrome, because JN was not feeling especially anxious and could sit calmly.

11. Respondent's records contain only a narrative that JN was prescribed certain drugs, but there is no rationale for the higher doses of the potentially dangerous drugs prescribed to JN – why the medications were used, the type used, the combination used. For instance, there is no documentation that Respondent was or was not using Paxil for anxiety.

12. A physician is required to maintain adequate medical records. An adequate medical record means a legible record containing, at a minimum, sufficient information to identify the patient, support the diagnosis, justify the treatment, accurately document the results, indicate advice and cautionary warnings provided to the patient and provide sufficient information for another practitioner to assume continuity of the patient's care at any point in the course of treatment. A.R.S. § 32-1401(2). Respondent's records were inadequate because they did not support his diagnosis, justify the treatment, or provide sufficient information for another practitioner to assume continuity of the patient's care.

13. The standard of care required Respondent to monitor a patient's tricyclic blood levels while he was on concurrent SSRIs.

14. Respondent deviated from the standard of care by failing to monitor JN's tricyclic blood levels while he was on concurrent SSRIs.

15. The standard of care required Respondent to refrain from prescribing a large quantity of tricyclic antidepressants and Ritalin to a patient who was a known risk for overdosing.

16. Respondent deviated from the standard of care by prescribing a large quantity of tricyclic antidepressants and Ritalin to JN who was a known risk for overdosing.

17. The standard of care required Respondent perform regular mental status examinations when treating a patient for multiple psychiatric diagnoses and to conduct repetitive questioning of a depressed patient regarding self harm, suicidal ideation or harm to others.

18. Respondent deviated from the standard of care by failing to perform regular mental status examinations and failing to question JN regarding potential harm to self or others.

19. The standard of care requires a physician to make an adequate DSM I-V diagnosis.

20. Respondent deviated from the standard of care by failing to make an adequate DSM I-V diagnosis.

21. JN overdosed while under Respondent's care and died.

CONCLUSIONS OF LAW

1. The Arizona Medical Board possesses jurisdiction over the subject matter hereof and over Respondent.

2. The Board has received substantial evidence supporting the Findings of Fact described above and said findings constitute unprofessional conduct or other grounds for the Board to take disciplinary action.

3. The conduct and circumstances described above constitutes unprofessional conduct pursuant to A.R.S. § 32-1401(27)(e) ("[f]ailing or refusing to maintain adequate records on a patient;") A.R.S. § 32-1401(27)(q) ("[a]ny conduct or practice that is or might be harmful or dangerous to the health of the patient of the public") and A.R.S. § 32-1401(27)(ll) ("[c]onduct that the board determines is gross negligence, repeated negligence or negligence resulting in harm to or the death of a patient.").

ORDER

Based upon the foregoing Findings of Fact and Conclusions of Law,

IT IS HEREBY ORDERED:

Respondent is issued a Letter of Reprimand for failure to diagnose and monitor a patient considered to be high risk for drug abuse; for inappropriate prescribing; and for inadequate medical records.

RIGHT TO PETITION FOR REHEARING OR REVIEW

Respondent is hereby notified that he has the right to petition for a rehearing or review. The petition for rehearing or review must be filed with the Board's Executive Director within thirty (30) days after service of this Order. A.R.S. § 41-1092.09(B). The petition for rehearing or review must set forth legally sufficient reasons for granting a rehearing or review. A.A.C. R4-16-103. Service of this order is effective five (5) days after date of mailing. A.R.S. § 41-1092.09(C). If a

petition for rehearing or review is not filed, the Board's Order becomes effective thirty-five (35) days after it is mailed to Respondent.

Respondent is further notified that the filing of a motion for rehearing or review is required to preserve any rights of appeal to the Superior Court.

DATED this 16th day of January, 2008.
